

PRABHLIN KAUR MATTA

San Diego, CA | (858) 828-7283 | prmatta@ucsd.edu | www.linkedin.com/in/prabhlinkm/

SUMMARY

Business analytics professional with experience in quantitative research, predictive modeling, and campaign performance analytics across consumer insights, pricing strategy, and financial risk. Proficient in SQL, Python, and Tableau to translate complex data into actionable insights for commercial and senior stakeholders. Proven track record managing end-to-end research projects on the supplier side for global FMCG and technology brands.

EDUCATION

M.S. in Business Analytics, Rady School of Management | UC San Diego, CA | 06/2026

Relevant Coursework: GenAI for Business | Healthcare Analytics | Data Collection & API Integration | Machine Learning | Customer Analytics | New Product Development

Post Graduate Diploma in Management, Major: Marketing | Welinkar Institute of Management, Mumbai | 04/2022

CERTIFICATIONS

DataCamp Professional Certificate – SQL

DataCamp Professional Certificate – Python

JPMorgan Chase & Co. Quantitative Research Virtual Experience | *Forage*

Tata GenAI Powered Data Analytics Virtual Experience | *Forage*

PROJECTS

Quantifying Impact of Contextual TV Advertising – Ad Measurement Study 01/2026 – Present

- Built an AI-driven ad effectiveness framework for an audience measurement platform, using household-level data to measure contextual ad lift.
- Modeled drivers of lift across segments, estimating impact on KPIs such as visibility and attention rate.
- Built Tableau dashboards to track performance, enabling optimization of ad targeting and content strategy.

JPMorgan Chase Quantitative Research Virtual Experience

Forage

- Built pricing and risk models for an energy trading use-case, enabling contract valuation and credit risk decisions.
- Applied time-series forecasting, PD modeling, and FICO-based segmentation to estimate gas prices, storage value, and borrower risk.
- Quantified expected loss (10% recovery) and forecasted prices one year ahead to support trading and risk strategy.

Churn Prediction & Retention

11/2025 – 12/2025

- Built a churn model for a telecom carrier, enabling proactive retention strategies.
- Developed logistic and neural models, achieving AUC 0.72 and correcting sampling bias to improve accuracy.
- Identified churn drivers, capturing 68% of at-risk customers via threshold-based targeting.
- Assessed CLV, aligning retention costs with breakeven to ensure profitability.

Credit Risk Analytics

11/2025 – 12/2025

- Built a delinquency prediction model for financial services, enabling risk-based collections and customer interventions.
- Modeled default probability using logistic regression on financial and behavioral data, identifying high-risk customers and key drivers (missed payments, utilization, DTI).

- Designed a risk segmentation framework to support targeted collections and decision-making.

ETL Data Pipeline & Reporting Automation

10/2025 – 11/2025

- Built a Python–SQL ETL pipeline in Snowflake, integrating and standardizing multi-source retail and weather data to enable scalable analysis.
- Mapped weather data to ZIP codes, identifying temperature-driven demand patterns impacting supplier sales performance.
- Automated data pipelines with Python, reducing manual effort and improving reporting consistency.

Personalized Campaign Optimization

08/2025 – 09/2025

- Built a personalized email targeting framework for a retail company, simulating response probabilities across 6 message variants.
- Modeled customer response and purchase value to identify the most effective message for each customer.
- Quantified personalization impact, driving profit uplift from ~\$2.79M to ~\$4.63M vs. random targeting.

Credit Card Product Optimization & CLV-Based Targeting

09/2025 – 10/2025

- Built a product optimization model for a fintech credit card campaign, targeting ~750K customers across 12 variants using factorial design.
- Modeled response drivers, identifying annual fee reducing response by ~70%.
- Simulated CLV and profit, balancing full-factorial experimentation with high-CLV targeting to select optimal offers.
- Delivered ~\$866K projected profit, with ~\$835K driven by optimized targeting.

Demand Forecasting Analysis

12/2025

- Built ML forecasting models for a large retail chain, improving demand and inventory planning.
- Developed an XGBoost model over a time-series baseline, incorporating seasonality and promotions to reduce WAPE from ~10% to 3% across 45 stores.

Targeting & Offer Optimization

08/2025 – 09/2025

- Built a predictive targeting model for a B2B software upsell campaign, optimizing customer selection for targeted outreach.
- Evaluated multiple models (logistic regression, neural networks, XGBoost), selecting XGBoost as the best-performing model for response prediction.
- Optimized targeting, identifying a ~30% threshold to maximize campaign profit.

EXPERIENCE

Research Analyst – Consumer Insights, NielsenIQ

06/2022 – 12/2023

- Led 100+ consumer interviews, quantifying drivers of brand choice and shopper behavior.
- Evaluated ad and product effectiveness using survey and A/B testing data, leveraging KPIs (purchase intent, recall, brand fit) to optimize campaigns for Samsung, Reliance, and McCormick.
- Designed AI-enabled consumer insights studies capturing real-time, in-context feedback across the purchase journey.
- Assessed digital and offline shopper journeys to identify key purchase drivers and inform targeting strategies.
- Delivered 20+ multi-market projects, managing budgets and vendors to ensure timely, high-quality execution.

Research Analyst – Line & Price Optimization, NielsenIQ

01/2024 – 07/2024

- Built elasticity-based pricing models using regression, forecasting sales impacts.
- Assessed 10K-record Nielsen data with SQL and Excel, evaluating SKU performance and driving pricing strategies.
- Simulated pricing scenarios with market and consumer data, cutting cannibalization by 10% and boosting sales 12%.
- Created Power BI dashboards for C-suite, delivering ROI insights on projects worth \$15K–\$30K.
- Partnered cross-functionally on proposals and vendors, accelerating delivery by 15% for clients like Mondelez, Unilever, and Nestlé.

Digital Marketing Intern, Sherwood Innovations

06/2021 – 07/2021

- Conducted secondary analysis on automobile afterparts, identifying category expansion and growth opportunities across products and competitors.
- Optimized Amazon storefront listings using Helium 10 SEO analysis, increasing customer engagement by 18%.

SPECIALIZED SKILLS

Programming & Tools: SQL | Python (Pandas, Polars, NumPy, Scikit-learn, Matplotlib) | R (familiar) | Snowflake | Power BI | Tableau | Excel (Advanced) | Pivot Tables | GitHub | PowerPoint

Analytics & Modeling: Predictive Modeling | Logistic Regression | Neural Networks | Decision Trees | Time-Series Forecasting | A/B & Multivariate Testing | Random Forest | Statistical Analysis

Research & Insights: Custom Survey & Questionnaire Design | Qualitative & Quantitative Research | Ad Effectiveness | Brand Lift Measurement | Nielsen Syndicated Data | Vendor Management | Proposal Writing

Domain Knowledge: Pricing & Margin Optimization | Campaign Performance Analytics | Risk Modeling | Consumer Behavior | Category Management | Retail Media | Financial Modeling | Shopper Insights

AI & Automation: Prompt Engineering | GenAI Workflow Design | API Integration | Reporting Automation | Stakeholder Enablement
